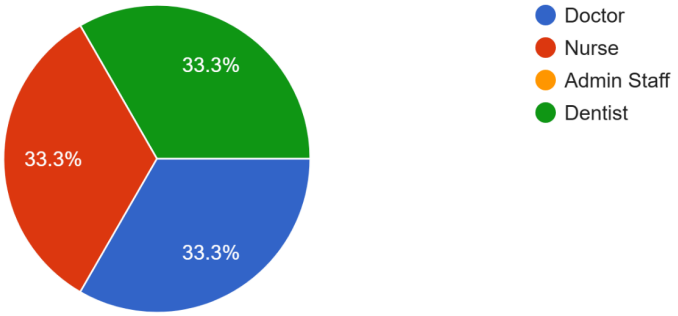
Clinic Staff Feedback on Patient Information/Record System

7 Responses

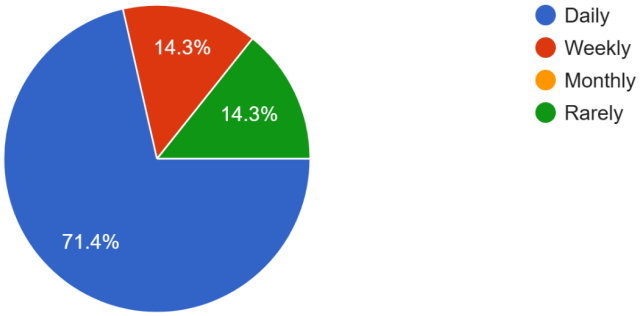
Position / Role in the Clinic

6 responses



Frequency of using the system

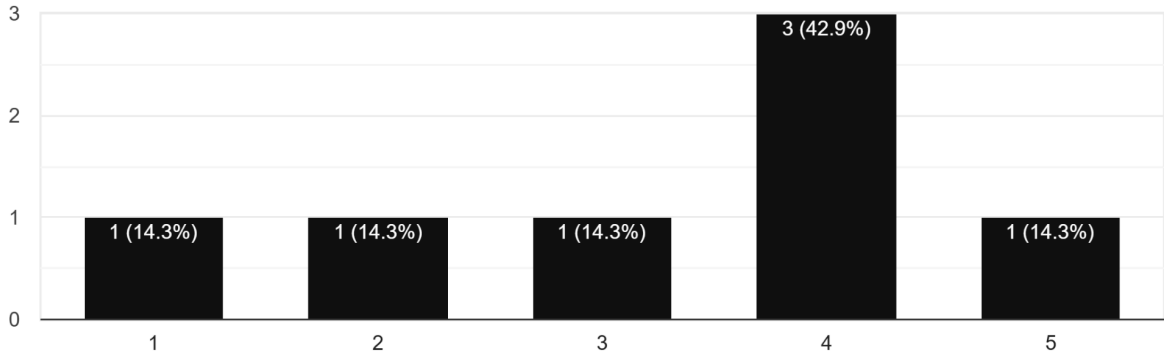
7 responses



System Efficiency & Accuracy

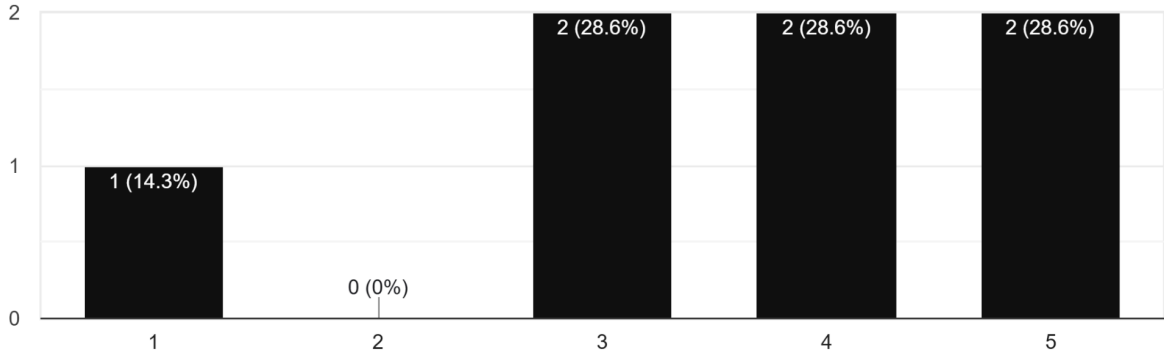
The system is efficient for managing patient records.

7 responses



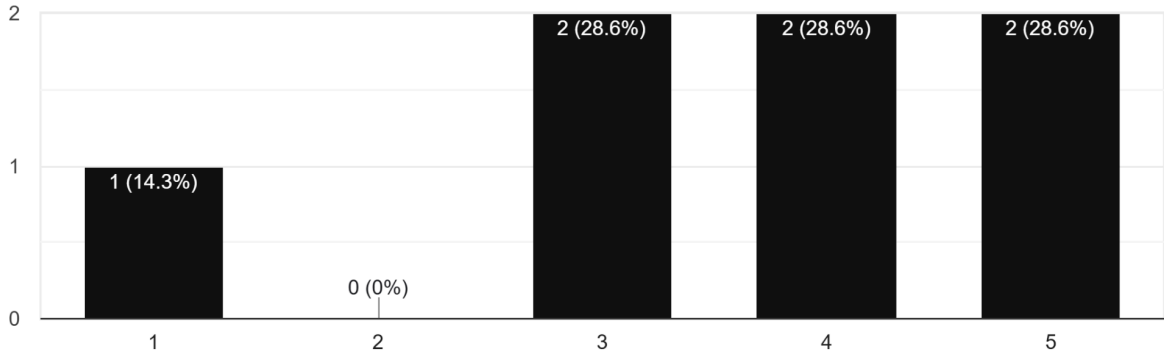
The data stored and retrieved is accurate and reliable.

7 responses



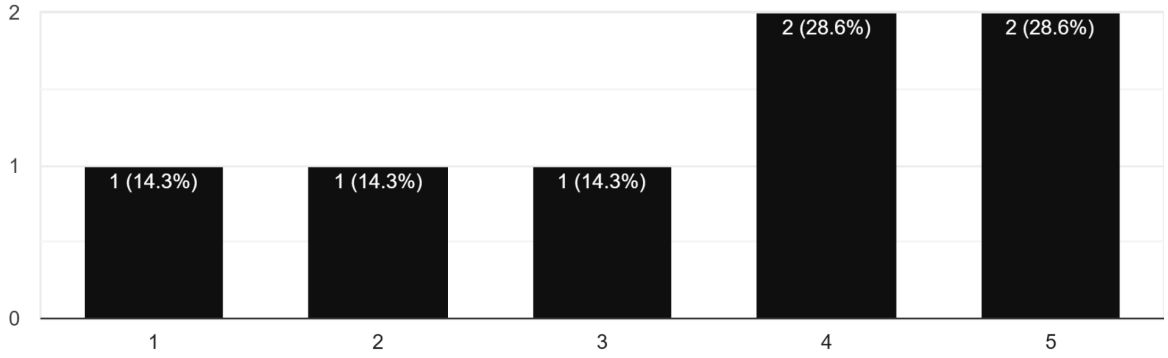
The system helps avoid duplicate or missing records.

7 responses



The system improves time management and workflow.

7 responses



Please share an example of how the system has helped or hindered your workflow.

6 responses

It will greatly improve patient monitoring by reducing physical paper records and creating a more systematic workflow in our department.

Easier tracking and efficient

Difficult to access

Efficient data gathering since students personally answers the questions given

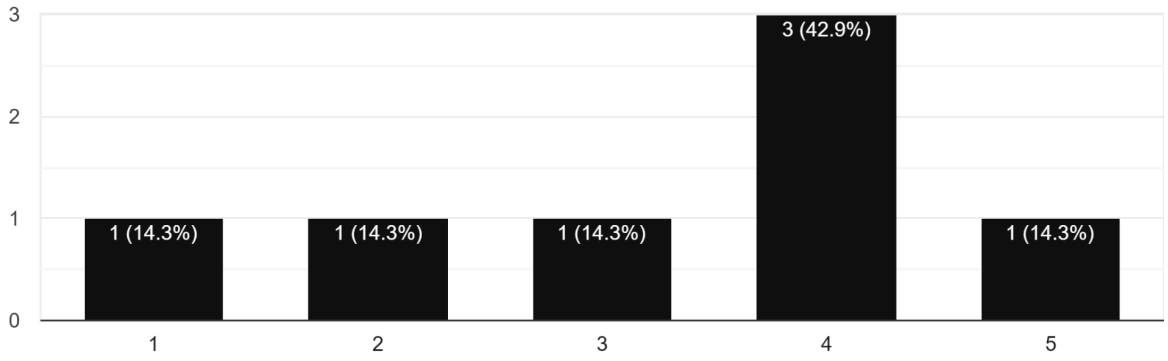
Easy and fast system flow

No security features to protect confidential data. While I understand the objective to create electronic medical records (EMR), we still need written records for documentation and possibly, medico-legal purposes. Using an EMR will only add to the hassle of our daily operations. We still need to generate written medical certificates and prescriptions for tangible documentation. Furthermore, I refrain to use my own devices in keeping patient medical records especially with the bulk of information this system will handle.

Reporting & Administrative Functions

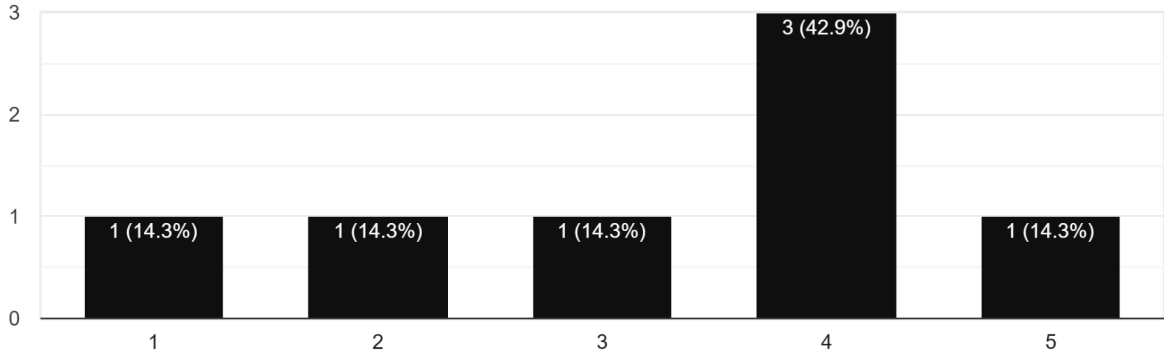
Generating reports (medical, statistical, administrative) is easy.

7 responses



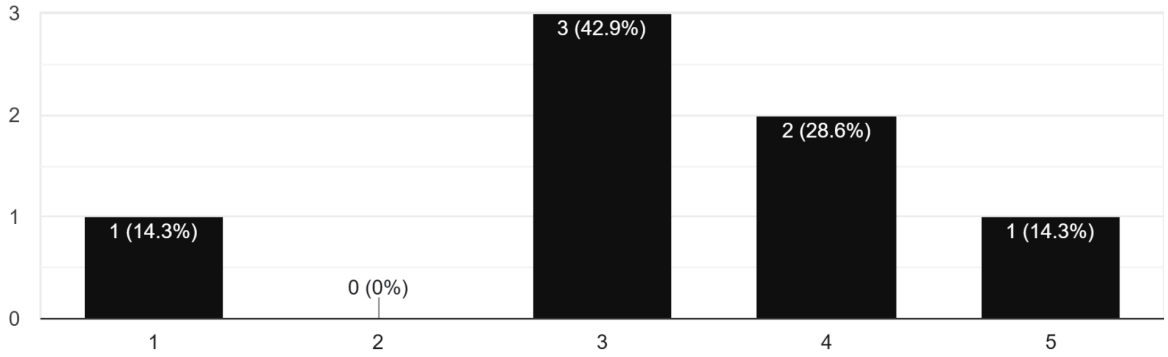
The system provides sufficient tools for analyzing patient data.

7 responses



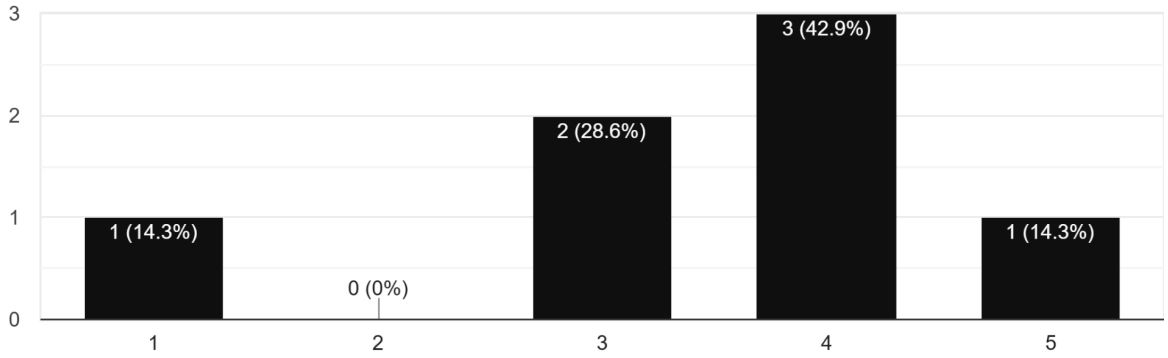
The feedback analysis feature is helpful for clinic operations.

7 responses



The system logs and audit trails are sufficient for monitoring activities.

7 responses



How can reporting or analysis be improved in the system?

5 responses

The reporting system is already efficient; however, adding a feature to sort students by academic year would further improve our ability to generate monitoring reports.

N/A

To integrate more dental features

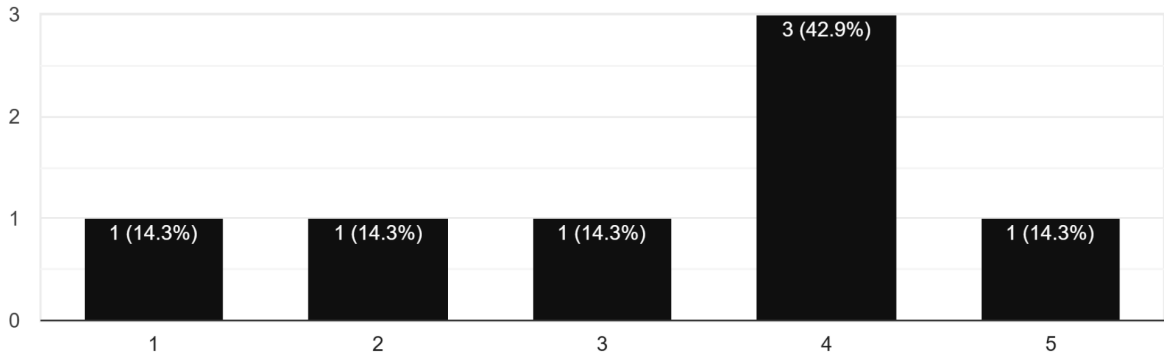
Provide privacy and confidential

Improve monitoring system especially so other doctors that can follow-up the same patient will see the previous consultations done for continuity of care.

Usability & Security

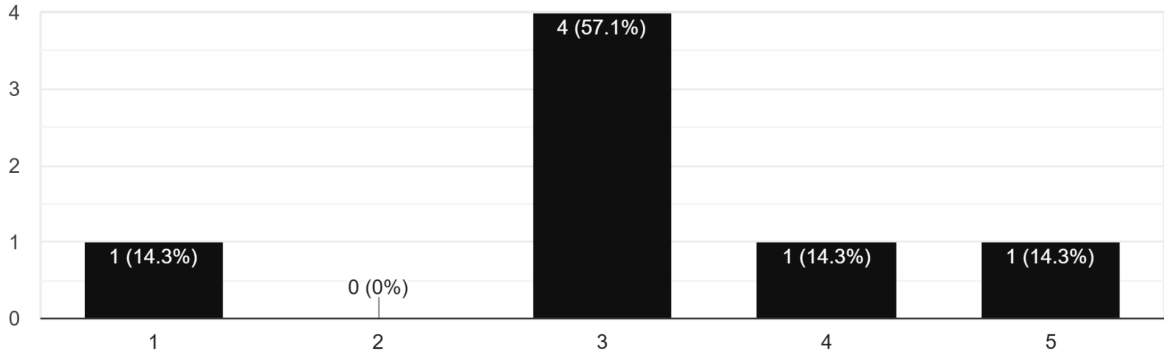
The interface is intuitive and easy to use for staff.

7 responses



Technical issues (errors, downtime, bugs) are minimal.

7 responses



What technical issues have you experienced, if any?

7 responses

There have been no technical issues so far; however, storage capacity should be considered to prevent potential lag.

none

None

Only used the system once so can not really tell if there are technical issues.

Need familiarity

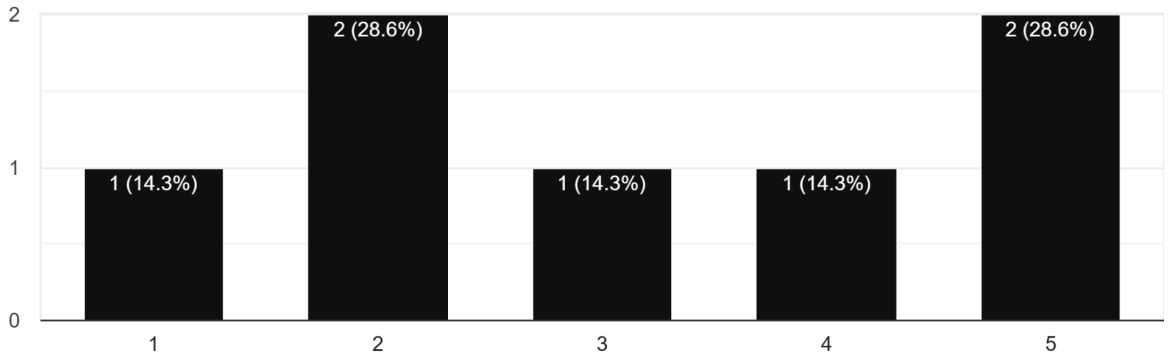
N/A

I have not used the system for so long.

Workflow & Integration

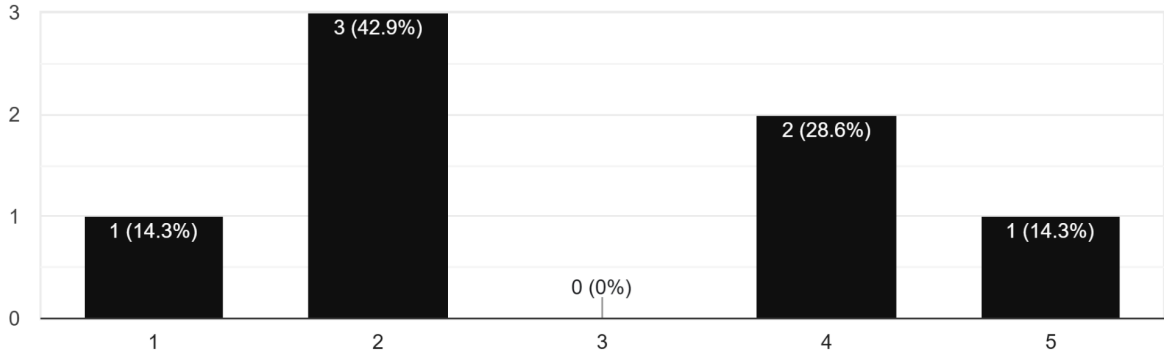
The system integrates well with our existing clinic workflow.

7 responses



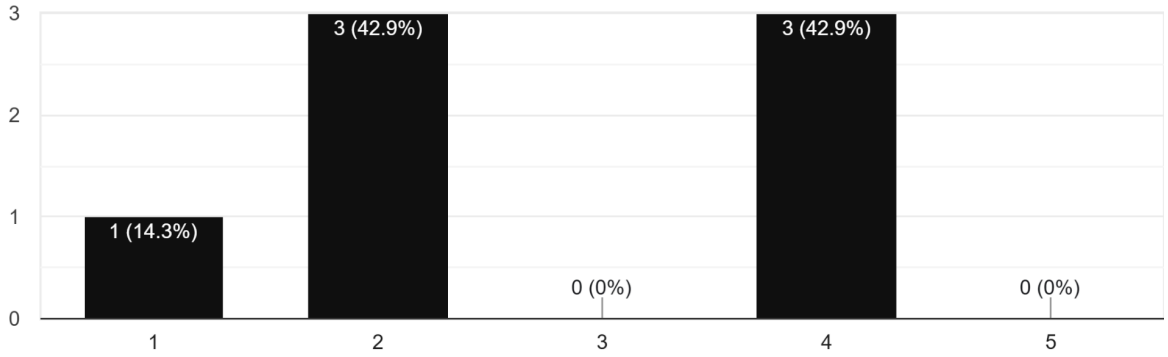
The system makes certain tasks easier compared to manual processes.

7 responses



The system reduces the need for external tools or manual effort.

7 responses



Which clinic tasks became significantly easier after using the system?

7 responses

- Retrieving student records and monitoring.
- generating data
- the organization of patient profile, it makes everything a lot more organize.
- Medical history of the patient
- Extracting patients data and services need
- Finding names
- I don't know. we have not tried using the system for long and we did not actually applied it to actual patients visiting the clinic.

Which tasks still require manual effort or outside tools?

7 responses

- the actual vital signs taking and physical examination.
- dental forms are not included in the system
- Physical Examination
- Dental charting
- Dental examinations and filling out dental cavities
- Dental sheet
- Writing prescription, medical certificates, charts.

Suggestions & Improvements

What additional features or tools would improve clinic operations?

7 responses

- adding a feature to sort students by academic year
- none
- Inventory
- Dental charting
- Cannot determine yet need to frequently use the system to identify improvement
- System for consultation doctor/dentist
- Improve security features. Improve on patient chart retrieval showing details of previous visits of the patient.

If you could change one thing about the system, what would it be?

7 responses

- None so far. Maybe we need to utilize the system frequently before we can identify what needs to be improved.
- the system ,must not be too tasking
- None
- Easy access but strong security features
- Simplest features for elderly staff
- Diagnosis
- Improve security features. Improve on patient chart retrieval showing details of previous visits of the patient.

Overall, I am satisfied with my experience using the system.
